DETAILED ACTION

Claims 1 – 20 have been presented for examination. Claims 2 – 4 and 19 have been cancelled and claim 6 has been amended in an amendment filed 1/20/2006.

Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Frederick D. Bailey (Reg. No. 42,282) on 2/20/2006.

This application has been amended as follows:

IN THE CLAIMS

Cancel claims 1 and its dependent claim 5 without prejudice.

Allowable Subject Matter

Claims 6 – 18 and 20 are allowed.

The following is an examiner's statement of reasons for allowance:

The above mentioned claims are allowable over prior arts because the CPA (Cited Prior Art) of record fails to teach or render obvious the claimed limitations in combination with the specific added limitations, as recited in independent claim 1 and subsequent dependent claims.

The prior arts, alone or in combination, fail to teach or suggest a method of establishing a security protocol structure in an application layer of a Wireless Application Protocol (WAP) standard, comprising: receiving a first message containing a client random value from a client; determining whether the first message is a valid message; extracting a pre-master secret from the first message; generating a specific server random value; generating and transmitting a second message to the client to pass the server random value to the client; generating a master secret in accordance with the extracted pre-master secret, client random value, and server random value; generating a key block in accordance with the master secret, client random value, and server random value; generating from the key block an encryption key value for encryption and decryption algorithms and Message Authentication Code (MAC) algorithms; generating a third message indicating that encryption is activated; and generating a fourth message to verify that the client has generated a client master secret identical to the master secret and to indicate that secured communication has been established between a server generating the server random value and the client, wherein the security protocol structure comprises: a secure session layer directly between a session layer including a wireless session protocol and an application layer

including a wireless application environment; a transaction layer including a wireless transaction protocol below the session layer; a security layer including a wireless transport layer security below the transaction layer; a transport layer including a wireless datagram protocol below the security layer; and a network layer below the transport layer, wherein the secure session layer provides a data security function in the application layer, and includes a secured session layer security (SSLS) protocol to provide a secure session interface to an application program, and wherein secure communication is established between a server and a client using the SSLS protocol and without using a certificate or public/private key generation operation.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Longbit Chai whose telephone number is 571-272-3788. The examiner can normally be reached on Monday-Friday 8:00am-4:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ayaz R Sheikh can be reached on 571-272-3795. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
